! IMPORTANT NOTICE:
- The picking of the sheet from the ream must happen in the presence of specific separators and of multiple ionised airflows which allow the sheet to be detached and then fed into the subsequent printing stations with ease. The resulting ionised air cushion generates an anti-static field able to neutralise static charges on synthetic sheets, simplifying both the printing and the stacking phase.
- The total thickness shown in the chart includes the layer, the glue and the liner (if present).
- ✓ All the above products are also available in sample box and bulk pallet.
